

Incident Report: Nuelink Sync Failure

Project: Abexis CMS (abexis.ch)
Date of incident: 14 September 2026
Report prepared: 14 September 2026
Prepared for: Abexis / Daniel Sengstag
Subject: LinkedIn post for 22 September 2026 not visible in Nuelink

Executive summary

On the morning of 14 September 2026, Daniel Sengstag approved three blog drafts for publication on 15, 22, and 29 September 2026. All three posts were **correctly scheduled in the CMS**. Two LinkedIn handoffs to **Nuelink succeeded**; the post scheduled for **22 September 2026** failed because the **Nuelink API returned HTTP 429** ("Too many requests. Please try again later.") when three approvals were sent within approximately four minutes.

Impact: Blog post and CMS scheduling are unaffected. Only the LinkedIn scheduling in Nuelink is missing for the 22 September article.

Recommended action: Manually retry the Nuelink handoff once from CMS → Social (KI). Do **not** re-approve the draft.

Client feedback (original)

Daniel reported that after releasing three posts in the CMS this morning, only two appeared in Nuelink. The post for **22 September 2026** ("Risk Management ist etwas für Langweiler") did not transfer.

Title	CMS status	Published (CMS)
Risikomanagement kann man sich sparen...	Freigegeben	15 Sep 2026, 06:31
Risk Management ist etwas für Langweiler	Freigegeben	22 Sep 2026, 06:31
Projektstatus: Alles im Plan	Freigegeben	29 Sep 2026, 06:31

Root cause

Nuelink API rate limiting (HTTP 429).

When a draft is approved in the CMS, the system:

1. Creates or updates a **scheduled blog post** in Firestore.
2. Prepares a **LinkedIn social post** linked to that draft.
3. Calls the **Nuelink public API** to schedule the LinkedIn post for the same date/time.

On 14 September 2026, three approvals triggered three Nuelink API calls in quick succession:

Time (UTC)	Event	Result
07:05:37	Nuelink handoff — <i>Risikomanagement kann man sich sparen...</i> (15 Sep)	Success — Nuelink post ID 4996867
07:07:32	Draft approved — <i>Risk Management ist etwas für Langweiler</i> (22 Sep)	CMS OK

07:07:33	Nuelink handoff for same draft	Failed — Too many requests. Please try again later.
07:09:51	Nuelink handoff — <i>Projektstatus: Alles im Plan</i> (29 Sep)	Success — Nuelink post ID 4996871

The middle request hit Nuelink's rate limit. The third request succeeded after a short delay, which is consistent with a rolling rate-limit window.

Technical evidence (Firestore)

Failed social post

Field	Value
Social document ID	n9h4A3dTwPSfzXhRCbFi
Draft ID	tWm8Kklaxm8jsWf6kf1D
Draft title	Risk Management ist etwas für Langweiler
CMS post ID	n7uC2KAixe3d6CMixSfU
CMS slug	risk-management-ist-etwas-fuer-langweiler
Scheduled publish	2026-09-22T04:31:00.000Z (22 Sep 2026, 06:31 Europe/Zurich)
nuelinkLastSentAt	<i>null</i> (never sent)
nuelinkLastError	Too many requests. Please try again later.
nuelinkLastPostId	<i>null</i>

Successful social posts (same batch)

15 September post

Field	Value
Social ID	geaV4sGkr6iTht0wgtJe
Draft ID	3jnGYu9M44vnG0x0vzwS
Post ID	614J0AfMkNCDPxj3kKns
Nuelink post ID	4996867
Nuelink scheduled at	2026-09-15 06:31:00
Sent at (UTC)	2026-09-14T07:05:37.160Z

29 September post

Field	Value
Social ID	dQ8KMbBm07az7i2jMcAY
Post ID	2HBiibDKAMGMP5ERyam0

Nuelink post ID	4996871
Nuelink scheduled at	2026-09-29 06:31:00
Sent at (UTC)	2026-09-14T07:09:51.289Z

What did not fail

- Draft approval and CMS scheduling for 22 September.
 - Blog post creation in Firestore (`posts` collection).
 - LinkedIn copy and image preparation (stored on social document).
 - Nuelink integration for the other two posts in the same session.
-

Error logging — where to look

There is **no separate Nuelink log file** or Vercel-specific Nuelink dashboard. Errors are persisted in **Firestore**:

Location	Fields
Collection <code>blogSocialPosts</code>	<code>nuelinkLastError</code> , <code>nuelinkLastSentAt</code> , <code>nuelinkLastPostId</code> , <code>nuelinkLastScheduledAt</code> , <code>nuelinkSends</code> (array)

The approve API returns `nuelinkError` in its JSON response, but the **CMS UI currently shows a success message even when Nuelink fails**, which is why Daniel did not see a warning at approval time.

Recovery procedure

Option A — CMS UI (recommended for Daniel)

1. Log in to **CMS** at <https://www.abexis.ch/admin>
2. Open **Social (KI)** or the social section on the draft editor
3. Find **Risk Management ist etwas für Langweiler**
4. Click **LinkedIn an Nuelink** once
5. Confirm the post appears in Nuelink scheduled for **22 Sep 2026, 06:31**

Do not click "Freigeben" again — the blog post is already scheduled.

Option B — CLI (developers)

From the abexis repo with Firebase/Nuelink env vars configured:

```
pnpm cms:repair-nuelink-social -- --draft tWm8Kklaxm8jsWf6kf1D --send
```

Recommended improvements

Priority	Improvement	Rationale
High	Show <code>nuelinkLastError</code> in CMS when approve returns an error	Prevents silent failures
High	Retry Nuelink on HTTP 429 with exponential backoff (e.g. 2s, 5s, 15s)	Handles batch approvals
Medium	Add delay between sequential Nuelink calls when approving multiple drafts	Reduces rate-limit hits

Low	Admin list column: "Nuelink status" (sent / error / pending)	Faster ops visibility
-----	--	-----------------------

Integration reference

Component	Path / detail
Nuelink client	src/lib/nuelink/client.ts
Approve + Nuelink handoff	src/lib/blogAutomation/cms-server/blogAutomationCmsOps.ts → cmsSetBlogDraftApproved
Manual Nuelink send	CMS → Social (KI) → "LinkedIn an Nuelink"
Repair script	scripts/repair-nuelink-social-handoff.ts
Env vars	NUELINK_API_KEY, NUELINK_BRAND_ID, NUELINK_COLLECTION_ID (see .env.example)

Nuelink API endpoint: POST
`https://nuelink.com/api/public/v1/brands/{brandId}/collections/{collectionId}/posts`
Publish mode on approve: **SCHEDULE** with `scheduledAt` formatted as `yyyy-MM-dd HH:mm:ss` in the CMS timezone (Europe/Zurich).

Conclusion

The 22 September article **is correctly set up in the CMS**. The gap is solely the **Nuelink LinkedIn schedule**, caused by a **transient API rate limit** during a batch of three approvals. A **single manual retry** of the Nuelink handoff resolves the issue without re-approving the draft.
